

TABLE OF CONTENTS

	Page
CHAPTER 1 – INTRODUCTION AND ALTERNATIVES DESCRIPTION	1-1
1.1 Introduction	1-1
CHAPTER 2 – METHODOLOGY AND COORDINATION	2-1
2.1 Analytical Tools	2-1
2.1.1 Transportation Models.....	2-1
2.1.2 Traffic Analyses	2-2
2.1.3 Crash Analyses	2-5
2.2 Analysis Methods and Performance Measures.....	2-6
2.2.1 Methods to Measure Congestion Relief	2-6
2.2.2 Methods to Measure Mobility Improvement	2-7
2.2.3 Methods to Measure Safety Improvement.....	2-8
2.2.4 Methods to Measure Truck Volume Reduction	2-8
2.3 Agency Consultation and Coordination.....	2-8
CHAPTER 3 – EXISTING CONDITIONS	3-1
3.1 Overview of Project Study Area	3-1
3.2 Description of the Corridors and Major Intersections	3-1
3.2.1 VT 2A Corridor.....	3-1
3.2.2 North Williston Road Corridor.....	3-5
3.3 Traffic Volumes	3-5
3.3.1 Traffic Data Collection	3-5
3.3.2 Traffic Volume Development	3-6
3.4 Analysis.....	3-6
3.4.1 Congestion Analysis	3-6
3.4.2 Safety Analysis.....	3-9
3.4.3 Mobility Analysis	3-17
3.4.4 Truck Traffic on Local Roads Analysis	3-17
3.5 Other Transportation	3-18
3.5.1 Transit.....	3-18
3.5.2 Pedestrian	3-18
3.5.3 Bicycle	3-19
CHAPTER 4 – IMPACTS AND MITIGATION	4-1
4.1 Introduction	4-1
4.2 Modeling and Traffic Volume Development	4-1
4.2.1 Transportation Improvements included in the 2030 No Build Alternative	4-1
4.2.2 Traffic Volume Development	4-5
4.3 Analysis Results for the No Build and Build Alternatives	4-5
4.3.1 Congestion	4-6
4.3.1.1 No Build	4-6
4.3.1.2 VT 2A Alternatives	4-7
4.3.1.3 Circ A/B Alternatives.....	4-13
4.3.1.4 Hybrid Alternatives (VT 2A Improvements plus Circ Street).....	4-23
4.3.1.5 Summary of Intersection Congestion Results.....	4-30
4.3.2 Safety	4-34
4.3.2.1 No Build	4-34
4.3.2.2 VT 2A Alternatives	4-35
4.3.2.3 Circ A/B Alternatives.....	4-36
4.3.2.4 Hybrid Alternatives (VT 2A Improvements plus Circ Street).....	4-36
4.3.2.5 Summary of Safety Results	4-37

4.3.3	Truck Traffic.....	4-38
4.3.3.1	No Build	4-38
4.3.3.2	VT 2A Alternatives	4-38
4.3.3.3	Circ A/B Alternatives.....	4-39
4.3.3.4	Hybrid Alternatives (VT 2A Improvements plus Circ Street)	4-40
4.3.3.5	Summary of Safety Results	4-42
4.3.4	Mobility	4-45
4.3.4.1	No Build	4-45
4.3.4.2	VT 2A Alternatives	4-45
4.3.4.3	Circ A/B Alternatives.....	4-47
4.3.4.4	Hybrid Alternatives (VT 2A Improvements plus Circ Street)	4-49
4.3.4.5	Summary of Mobility Results	4-50
4.4	Supplemental Traffic and Transportation Analyses of a "Without Segments G-J" Scenario.....	4-53

CHAPTER 5 – REFERENCES5-1

LIST OF TABLES

Table 2-1	Capacity Analysis and Microsimulation Software	2-3
Table 2-2	Intersection Level of Service Criteria.....	2-6
Table 3-1	Traffic Analysis Locations.....	3-7
Table 3-2	2005 Existing Capacity Analysis Results Overall LOS for Signalized Intersections.....	3-8
Table 3-3	2005 Existing Link V/C Ratios AM and PM Peak Hours.....	3-8
Table 3-4	Mainline Crash Statistics Existing Condition (1999 to 2003)	3-10
Table 3-5	Intersection Crash Statistics Existing Condition (1999 to 2003)	3-11
Table 3-6	Mainline Crash Summary - By Collision Type Existing Condition (1999 to 2003)	3-11
Table 3-7	Mainline Crash Summary – By Severity Existing Condition (1999 to 2003)	3-11
Table 3-8	Mainline Accident Rates Williston and Essex Junction Corridors (Segments Higher than the Statewide Rate) Existing Condition (1999 to 2003)	3-13
Table 3-9	Intersection Crash Summary Existing Condition (1999 to 2003)	3-15
Table 3-10	Intersection Crash Rates Existing Condition (1999 to 2003)	3-16
Table 3-11	2005 Existing Mobility Analysis Weighted Average Travel Time per Vehicle.....	3-17

Table 4-1	Transportation Projects Included in DEIS No Build Scenario.....	4-3
Table 4-2	2030 No Build Capacity Analysis Results Overall Weekday LOS for Signalized Intersections.....	4-6
Table 4-3	2030 No Build Link V/C Ratio Weekday AM and PM peak hours.....	4-7
Table 4-4	Effect on Level of Service at Major VT 2A Intersections	4-31
Table 4-5	Effect on VT 2A Intersections with Unacceptable Level of Service	4-31
Table 4-6	Effect on VT 2A Roadway Segments (V/C Ratio > 1.00) Weekday AM and PM Peak Hours.....	4-32
Table 4-7	Effect on North Williston Road Congested Roadway Segments.....	4-34
Table 4-8	Annual Crash Analysis Results 2030 No Build Alternative.....	4-35
Table 4-9	Annual Crash Analysis Results Build Alternatives.....	4-37
Table 4-10	Effect of Truck Traffic in Residential Areas on Federal Aid Highways	4-42
Table 4-11	Effect of Truck Traffic in Residential Areas on Local Roadways.....	4-43
Table 4-12	2005 Existing and 2030 No Build Mobility Analysis Weighted Average Travel Time per Vehicle.....	4-45
Table 4-13	Mobility Analysis Summary Weekday AM and PM Peak Hours.....	4-51
Table 4-14	Chittenden County Vehicle Miles Traveled (VMT) And Vehicle Hours Traveled (VHT) – Weekday PM Peak Hour	4-53

LIST OF FIGURES

Figure 3-1	Project Area
Figure 4-1	No Build Transportation Projects
Figure 4-2	Projected 2030 Intersection Level of Service (LOS) - AM Peak Hour
Figure 4-3	Projected 2030 Intersection Level of Service (LOS) - PM Peak Hour
Figure 4-4	Projected 2030 Volume/Capacity (V/C) Ratios - AM Peak Hour
Figure 4-5	Projected 2030 Volume/Capacity (V/C) Ratios - PM Peak Hour

APPENDICES

Appendix A	– CCMPO Model Documentation
Appendix B	– Traffic Analysis Methods White Paper
Appendix C	– Crash Data (1999-2003) and Crash Analysis Results
Appendix D	– Manual Turning Movement Count Summary Data
Appendix E	– Capacity Analysis Results
Appendix F	– Roundabout Design Peer Review
Appendix G	– “Without Segments G-J” Scenario

Transportation Technical Report Volume II
